Perhaps the most versatile of all the Polycoat products are our polyurea coatings. For over three decades, Polycoat's strong leadership, pioneering technology, and innovation have resulted in some of the most specialized coating applications in the world. With our strong R&D, modernized manufacturing plants, and quality control we market a wide variety of proprietary single and plural component aromatic and aliphatic polyurea products. Polycoat offers complete coating systems to protect and waterproof many different types of substrates, from harsh chemical environments to extreme weather conditions.

Polyeuro® Series
The Polyeuro® series consists of 100% solids, fast-setting aliphatic, aromatic, and hybrid systems which can be applied using either high or low pressure plural component spray machines. In addition to Major League Baseball stadiums and training facilities, they have also been extensively used in various industrial, marine, mining, and commercial applications such as tank linings, secondary containment, floors, and waterproofing. This includes various environments and geographical locations; from Alaska's North Slopes to Hawaii's tropical weather; from mines in South America to industrial plants in the Middle East; and to many other parts of the world including Australia, New Zealand, Southeast Asia, and Europe.

Staingard Series
Our Staingard series embodies the properties of Polyaspartic technology, meeting today's demands for superior color and gloss retention, as well as durability against weathering and abrasion resistance. With highly flexible properties, this is the perfect product for concrete applications. It can be used to encapsulate vinyl chip and colored quartz systems and is a favorite in the garage floor market.

Rapid-curing and odor-friendly, it is also widely accepted in hospitals, mechanical rooms, laboratories, warehouses, or just about any other area that requires a quality system topcoat.
Polycoat Products manufactures high performance polyurethane, polyurea, and polyaspartic coatings for construction and waterproofing industries. Our innovative approach serves industry standards as well as special project requirements for contractors, architects, and specifiers.

• Vehicular Decks
• Pedestrian Decks
• Fire Rated Pedestrian Decks
• Below Grade Membranes
• Caulking Compounds
• NSF-61 Approved Coatings
• Polyurethane - Polyurea - Polyaspartic

Polycoat offers odor-friendly decking systems. Quick curing and fast turnaround systems are also available when time sensitive demands are a requirement on your project.

Fire Rated Decks
Polycoat offers "an industry first" elastomeric deck coating with Class A and Class B fire ratings.

Where fire ratings are preferred or required, our fire rated elastomeric decking system offers added safety in an attractive waterproofing deck.

ICC Evaluated
- Polydeck® 355 gives a Class B Fire Rating on 5/8” plywood
- Polydeck® 400 gives a Class A Fire Rating on 3/4” plywood

Polycoat’s pedestrian decks, fire rated decks, and vehicular parking decks will meet your highest expectations and offer superior protection for all your waterproofing requirements.

Vehicular Parking Decks
Whether the need is to protect a brand new parking structure or to repair and extend the service life of an existing parking surface, the vehicular systems offered by Polycoat are unsurpassed in meeting these needs. Each system is designed to provide high durability and superior resistance for vehicular traffic.

- Poly-I-Gard® 246 is ideal for vehicular traffic as well as a general use. It is a heavy-duty coating suitable for a wide range of applications from walkways to helicopter pads. Also available in an odor-friendly formulation.
- Poly-I-Gard® 295 is a rapid-curing, odor-friendly traffic coating that minimizes downtime in areas where time is a premium.

Below Grade Membranes
- Polycoat PC-IM 129 is a two-component, liquid-applied, asphalt – extended aromatic polyurethane that adheres to most substrates. It is ANSI / NSF-61 approved for potable water.
- Aquaseal® 5000 is a single-component, liquid-applied, bitumen-modified urethane polyurea waterproofing membrane for vertical and horizontal surfaces.

Caulking Compounds
Polycoat’s caulking materials are 100% solids, odorless, and can be used in a variety of interior or exterior applications to fill joints, repair random cracks and concrete spalls. They also meet USDA criteria for incidental contact. Polycoat caulking compounds are rapid-setting and capable of remaining flexible in cold temperatures.

- Poly-Caulk® 50 and Poly-Caulk® 80 are both aromatic polyurea formulations that can be applied with plural component equipment for control joints and freezer applications.
- Poly-Caulk® HM is a hand-mixed, self-leveling, and rapid-setting modified polyurea material that can be applied without plural component equipment.
- Poly-Caulk® PX27SL and PX27GG are conventional polyurethane caulking materials available in self-leveling and gun grade formulations.

Polycoat’s pedestrian decks, fire rated decks, and vehicular parking decks will meet your highest expectations and offer superior protection for all your waterproofing requirements.
