DESCRIPTION
Polyeuro® 7901 is a fast setting, rapid curing, 100% solids, flexible, aliphatic, color stable, two component spray polyurea that can be applied to suitably prepared interior or exterior concrete and metal surfaces. Its extremely fast gel time makes it suitable for applications down to -20°F. It may be applied in single or multiple applications without appreciable sagging and is relatively insensitive to moisture and temperature allowing application in most temperatures. Polyeuro® 7901 offers a tack free time of less than one minute and exhibits 450% elongation upon curing with 90 Shore A hardness.

FEATURES
- Excellent Color Retention
- Excellent Thermal Stability
- No Toxic Vapors
- Meets USDA Criteria
- Low Temperature Flexibility
- Good Chemical Resistance
- Interior or Exterior Applications
- Coats Most Metals without Primer
- Installed With or Without Reinforcement in Transitional Areas

TYPICAL USES
- Airports
- Power Plants
- Refineries
- Concrete (Primed), substrate failure occurred
- Concrete (Shot blasted profile), substrate failure occurred
- Steel (90 um blast profile)
- Marine Environments
- Paper and Pulp Mills
- Parking Garage Decks
- OEM
- Walkways and Balconies
- Water and Waste Water Treatment
- Industrial and Manufacturing Facilities

COLORS
Clear/Neutral. Custom colors are available upon request. Color Packs, when used, must be added to Part-B.

PACKAGING
10 gallon kit: 5 gallons Part-A (Isocyanate side) and 5 gallons Part-B (Resin side).
100 gallon kit: 50 gallons Part-A (Isocyanate side) and 50 gallons Part-B (Resin side).

COVERAGE
Polyeuro® 7901 may be applied at any rate to achieve desired thickness. Theoretical coverage for 1 mil thickness is one gallon per 1600 sq. ft.

SURFACE PREPARATION
In general, coating performance and adhesion are directly proportional to surface preparation. Most failures in the performance of surface coatings can be attributed to poor surface preparation. Polyurea coatings rely on the structural strength of the substrate to which they are applied. All surfaces must be free of dust, dirt, oil, grease, rust, corrosion and other contaminants. When coating substrates previously used, it is important to consider the possibility of substrate absorption, which may affect the adhesion of the coating system, regardless of the surface preparation. Polycoat recognizes the potential for unique substrates from one project to another. The following information is for general reference, and for project-specific questions, contact Polycoat.

TECHNICAL DATA
Mix Ratio by Volume ............................................ 1A : 1B
Pot Life @160°F .................................................. 5 - 10 secs
Tack Free Time @ 80-90°F Substrate ................. 40 - 60 secs
Recoat Time ...................................................... 0 - 6 hours
Viscosity at 150-160°F (66.5-71°C), Brookfield:
- Part-A .............................................................. 160 cps
- Part-B .............................................................. 40 cps
Density (Side A & B Combined) .................... 8.55 lbs/gal
Flash Point ....................................................... > 200°F
Hardness, ASTM D-2240 ............................ 90 ± 5 A
Tensile Strength, ASTM D-412 ..................... 3200 ± 300 psi
Elongation, ASTM D-412 ............................... 450 ± 50%
Tear, ASTM D-624 ........................................ 325 ± 50 pli
Service Temperature - Dry ....................... -40°F to 250°F
Service Temperature - Wet ....................... 40°F to 120°F
Water Vapor Permeability, ASTM E-96 ........... 0.4889 perm-inch
VOC Content ...................................................... 0 gm/lit
Recommended Applied Thickness .............. > 2 mm
Return to Service: Foot Traffic ....................... 2 - 4 hours
Return to Service: Full Service .................... 10 - 24 hours
Taber Abrasion Resistance, ASTM D4060  
(CS17 wheel, 1000 cycles, 1 kg load)(maximum) .... 33 mg loss
Water Absorption, ASTM D471  
(maximum 23°C, 24 hours) ............................ < 0.5%
Impact Resistance @ 25°C (ASTM G14) ........... > 200 lbs
Crack Bridging, ASTM C836  
(-25°C, 1.6mm crack, 25 cycles) ..................... Pass
Pull-Off Strength (minimum), ASTM D4541: 
Concrete (Shot blasted profile), substrate failure occurred ............. > 500 psi
Concrete (Primed), substrate failure occurred ............. > 500 psi
Steel (90 um blast profile) .............................. > 900 psi
Lineal Shrinkage .............................................. 1 - 2%
Resistance to Weathering, ASTM G-23  
(Type QUV Weatherometer-2000 hrs exposure) ............... No cracking, blistering. Gloss reduction & minor chalking are noted.

(*These physical properties from sample sprayed with Graco Foam Cat 200 @ 2000 psi minimum, with Gusmer GX7-400 mechanical purge gun @ 150-160°F. Different machine and parameter will change these properties. User should perform their own independent testing as properties are approximate.)
New and Old Concrete: Refer to SSPC-SP13/NACE 6, or ICRi 03732: CSP 3-6. New concrete must be cured for 28 days prior to product application. Surface must be clean, dry, sound and offer sufficient profile for product adhesion. Remove all dust, dirt, oil, form release agents, curing compounds, salts, efflorescence, laitance and other foreign matter by shotblasting and/or suitable chemical means, in accordance with local chemical regulations. Rinse thoroughly, to achieve a pH between 8.0 and 11.0. Allow to dry completely. If old concrete has a surface that has deteriorated to an unacceptably rough surface, Polycoat Products PC-260 or a mixture of Polyprime 21 and sand should be used as a repair agent for cracks, spalls, bug holes and voids. Upon full cure of the repair agent, prime the entire surface intended for coating.

Concrete Surface Preparation Reference:
ASTM D4258 - Standard practice for cleaning concrete
ASTM D4259 - Standard practice for finishing concrete
ASTM D4260 - Standard practice for etching concrete
ASTM F1869 - Standard test method for measuring moisture vapor emission rate of concrete
ICRI 03732 - Concrete surface preparation

Wood:
All wood should be clean, dry and free of any knots, splinters, oil, grease or other contaminants. Splintered or rough areas should be sanded. Knots should be repaired using Polycoat Products PC-260 sand with sand. Upon full cure of the repair agent, prime the entire surface intended for coating.

Steel (Atmospheric and Immersion Exposure):
Remove all oil, grease, weld spatters and round off any sharp edges from surface. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Optimum surface profile is 2-3 mils. Prime and shoot Polyuro® on to any bare metal the same day as it is cleaned to minimize any potential flash rusting.

Aluminum:
Aluminum should be blasted with aluminum oxide or sand, and not with steel or metal grit. Excessive blasting may result in a warped or deformed surface. After blasting, wash aluminum with a commercially available aluminum cleaner. Allow to dry, then prime.

Brass and Copper:
Brass and copper should be blasted with sand, and not with steel or metal grit. Remove all dust and grease prior to applying primer.

Galvanized Surfaces:
Clean and degrease any contaminated surfaces before priming. Do not blast galvanized surfaces with an abrasive grit. An adhesion test is recommended prior to starting the project.

Fiberglass Reinforced Plastics:
The gel coat should be lightly blasted or sanded with 80 grit sandpaper and cleaned.

Plastic Foams:
Enhanced adhesion is obtained when the foam is mechanically abraded. When coating polystyrene, do not use a solvent-based primer.

Textiles, Canvas, Fabrics:
Adhesion to most fabrics, geothermal membranes and textiles does not require a primer.

Stainless Steel:
Stainless steel may be grit blasted and degreased before priming. Some stainless steel alloys are so inert that it is not possible to achieve a satisfactory bond. An adhesion test is recommended prior to starting the project.

New and Old Cast Iron:
Blasted with a steel grit and degrease before priming. Old cast iron is difficult to prepare for a satisfactory bond. It can absorb oil and water soluble contaminants that will keep returning to the surface after the coating system has been applied and affect the coating system adhesion. An adhesion test is recommended prior to starting the project.

All Other Surfaces:
An adhesion test is recommended prior to starting the project.

MIXING
Polyuro® 7901 may not be diluted under any circumstances. Thoughly mix Polyuro® 7901 Part-B (Resin side) with air driven power equipment until a homogeneous mixture and color is obtained.

APPLICATION
Both Part-A and Part-B material should be preconditioned at 80-90°F before application. Recommended surface temperature must be at least 5°F above the dew point. Polyuro® 7901 should be applied using a plural component, heated, high pressure 1:1 spray mixing equipment like Graco’s Reactor, Glass Craft or other equivalent machine may be used. Both Part-A and Part-B materials should be sprayed at a minimum of 2000 psi and at temperatures above 150°F. Adequate pressure and temperature should be maintained at all times. Polyuro® 7901 should be sprayed in smooth, multidirectional passes to improve uniform thickness and appearance.

STORAGE
Polyuro® 7901 has a shelf life of six (6) months from date of manufacture in original, factory-sealed containers. Avoid freezing temperatures. Store drums on wooden pallets to avoid direct contact with the ground. If stored for a long period of time, rotate Part-A and Part-B drums regularly.

LIMITATIONS
Do not open until ready to use.

WARNING
This product contains Isocyanates and Curative Material. This product is considered Dangerous Goods. DOT regulations classify it as:

Part-A: TOXIC LIQUID, organic, N.O.S. (Isophorone Disocyanate), Class 6.1, UN 2810, PG III, TOXIC
Part-B: AMINES, liquid, corrosive, N.O.S (polyoxypropylenediamine), Class 8, UN 2735, PG III, CORROSIVE

LIMITED WARRANTY
Polycoat Products warrants its products to be free of manufacturing defects and that they will meet Polycoat Products current published physical properties. Polycoat Products warrants that its products, when properly installed by a state licensed waterproofing contractor according to Polycoat Products guide specifications and product data sheets over a sound, properly prepared substrate, will not allow water migration for a period of 1 (one) year. Seller’s and manufacturer’s sole responsibility shall be to replace that portion of the product of this manufacturer which proves to be defective. There are no other warranties by Polycoat Products of any nature whatsoever expressed or implied, including any warranty of merchantability or fitness for a particular purpose in connection with this product. Polycoat Products shall not be liable for consequential or incidental damages resulting from this claim or from any other cause or source of any kind whatsoever. Should any warranty or guarantee be based on a false premise, Polycoat Products must be notified within 30 days of the claim or loss before a warranty claim will be entertained.

DISCLAIMER
All guidelines, recommendations, statements, and technical data contained herein are based on information we believe to be reliable and correct, but accuracy and completeness of said tests are not guaranteed and are not to be construed as a warranty, either expressed or implied. Polycoat Products shall not be liable for damages of any sort, including remote or consequential damages resulting from this claim or from any other cause or source of any kind whatsoever. Polycoat Products shall not be liable for use of this product in a manner that is in violation of any patent held by others. In addition, no warranty or guarantee is being offered with respect to appearance, color, lustering, chalking, crazing, shrinkage, peeling, normal wear and tear or improper application by the applicator. Damage caused by abuse, neglect and lack of proper maintenance, acts of nature and/or physical movement of the substrate or structural defects are also excluded from the limited warranty. Polycoat Products reserves the rights to conduct performance tests on any material claimed to be defective prior to any repairs by owner, general contractor, or applicator.

ACCEPTANCE
Any acceptance of Polycoat Products products by the owner to products to be in free of manufacturing defects and that they will meet Polycoat Products current published physical properties. Polycoat Products warrants that its products, when properly installed by a state licensed waterproofing contractor according to Polycoat Products guide specifications and product data sheets over a sound, properly prepared substrate, will not allow water migration for a period of 1 (one) year. Seller’s and manufacturer’s sole responsibility shall be to replace that portion of the product of this manufacturer which proves to be defective. There are no other warranties by Polycoat Products of any nature whatsoever expressed or implied, including any warranty of merchantability or fitness for a particular purpose in connection with this product. Polycoat Products shall not be liable for damages of any sort, including remote or consequential damages resulting from this claim or from any other cause or source of any kind whatsoever. Should any warranty or guarantee be based on a false premise, Polycoat Products must be notified within 30 days of the claim or loss before a warranty claim will be entertained.

Polycoat Products reserves the rights to conduct performance tests on any material claimed to be defective prior to any repairs by owner, general contractor, or applicator.

The product contains Isocyanates and Curative Material. This product is considered Dangerous Goods. DOT regulations classify it as:

Part-A: TOXIC LIQUID, organic, N.O.S. (Isophorone Disocyanate), Class 6.1, UN 2810, PG III, TOXIC
Part-B: AMINES, liquid, corrosive, N.O.S (polyoxypropylenediamine), Class 8, UN 2735, PG III, CORROSIVE

Please read all information in the general guidelines, product data sheets, guide specifications and material safety data sheets (MSDS) before applying material.
